

CLAIMS

What is claimed is:

1. A composition comprising:
a glycol;
a silicone;
a quaternium; and
a polymer viscosity modulator.
2. The composition of claim 1, wherein the composition has a pH of less than 3.5.
3. The composition of claim 1, wherein the composition has a pH in a range of 2.8 to 3.2.
4. The composition of claim 1, wherein the composition has a pH of 3.
5. The composition of claim 1, wherein the composition comprises less than 1% of an alpha-hydroxy acid.
6. The composition of claim 1, comprising:
about 1% to about 10% glycol by weight;
about 2% to about 30% silicone by weight;
about 0.1% to about 20% quaternium by weight;
about 0.01% to about 1% polymer viscosity modulator by weight; and
about 60% to about 90% water by weight.
7. The composition of claim 1, wherein the glycol comprises a material selected from the group consisting of propylene glycol, butylene glycol, glycerin, ethoxy diglycol, and mixtures and blends thereof.

8. The composition of claim 1, wherein the silicone comprises dimethicone.
9. The composition of claim 1, wherein the quaternium comprises a material selected from the group consisting of behentrimonium methosulfate, cetearyl alcohol, and mixtures and blends thereof.
10. A composition of claim 1, wherein the polymer viscosity modulator comprises a material selected from the group consisting of polyquaternium-37, propylene glycol dicaprylate/dicaprate, PPG-1 trideceth-6, and mixtures and blends thereof.
11. The composition of claim 1, further comprising a vegetable oil.
12. The composition of claim 11, wherein the vegetable oil comprises an avocado oil.
13. The composition of claim 1, further comprising at least one material selected from the group consisting of ascorbyl palmitate, tocopherol, aloe barbadensis, aloe vera extract, persea gratissima, avocado oil, ethylhexyl palmitate, lecithin, capric triglyceride, caprylic triglyceride, isopropylparaben, isobutylparaben, butylparaben, methylparaben, alcohol, BHT, and blends and mixtures thereof.
14. The composition of claim 1, wherein the composition comprises an emulsion.
15. A method comprising:
 - applying a quantity of a composition to a portion of human skin, the composition comprising a glycol, a silicone, a quaternium, and a polymer viscosity modulator, wherein the composition has a pH of less than about 3.5;
 - rubbing the skin to distribute the composition over the skin; and
 - leaving the composition on the skin.
